

Joystick Labs (JSK)

Official Token Minting Announcement

Date: 19.10.2025

To strengthen the long-term growth of the Joystick Labs (JSK) ecosystem and to support the rapid expansion of our GameFi infrastructure, the team has officially decided to initiate a token minting plan after careful evaluation and community consultation.

The primary goals of this minting are:

- 1** Ecosystem Expansion – The newly minted tokens will help us onboard more gamers, creators, and developers into the Joystick Labs ecosystem, driving active engagement across our dApp and gaming network.
- 2** Sustainable Growth & Rewards – The minted tokens will primarily be allocated to community rewards, staking pools, liquidity incentives, and future ecosystem developments — ensuring a stable, self-sustaining model for all participants.
- 3** Enhanced Liquidity & Ecosystem Support – This strategic mint will strengthen the project's long-term liquidity, reinforce stability in the market, and empower our continuous innovation in GameFi and Web3 gaming.

- **Total Supply Updated:** 100,000,000,000 JSK

- Purpose of Minting: All newly minted tokens will be securely locked in the ecosystem fund, released gradually through transparent, on-chain rules to prevent short-term market disruption.
- Schedule: The minting contract and full implementation details will be executed and visible on-chain today, ensuring complete transparency and traceability.

At Joystick Labs, our vision has always been to build a community-driven, utility-rich, and transparent GameFi ecosystem.

This token mint is not merely an expansion of supply — it's a strategic step forward to empower the Joystick ecosystem, drive innovation, and strengthen our global reach.

Stay tuned for further updates via our official website and social media channels.

Thank you for your continued trust and support!
